## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election of group II in the reply filed on 4/28/08 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 1-11 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4/28/08.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 15 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

"The shape of a chalice" is vague and indefinite. Chalice comes in many varieties of shapes and forms. Please explain.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12, 14, 16, 17, and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Sonneborn et al (cited in the IDS and is also shown in figure 3 as admitted prior art. The examiner will use the admitted prior art's reference to clarify the rejection).

Sonneborn et al teaches forward mount (which is 203) and aft mount 205. The phrase "wherein the contribution..." and "wherein the torque..." carry no patentable weight.

Re claim 14, the forward mount defines a housing since it is hollow.

Re claim 17, the legs 213b and 123c form a bipod in a plane that is transverse to the longitudinal axis of the engine.

Re claim 19, the rigid links 213a and 213b are mounted to pylon at two points and attached to the engine at one point (which is where the engine mounting bracket 211 is located). They form a bipod assembly.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13, 15, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sonneborn et al in view of McDowall 2718756.

Sonneborn et al teaches all claimed parts but is silent on the "chalice" shape forward mount with an annular base portion, top portion, and flexure region. However, McDowall

discloses a chalice like mount 26 with an annular base portion connected to the engine B, top portion connected to the transmission A, and flexure region, which is the middle part of the mount.

Re claim 18, although Sonneborn doesn't explicitly mention a mounted to pylon mounting bracket, the examiner believes that it is there. Plus, the examiner takes official notice that pylon mount brackets are well known and a person skilled in the art would have used them to easily mount the engine to the pylons.
